

FLEXURAL STRENGTH AND SHEAR BOND STRENGTH  
OF SELF-ETCHING/SELF-ADHESIVE  
RESIN LUTING AGENTS

by

Richard S. Adcook

Submitted to the Graduate Faculty of the School of Dentistry in partial fulfillment of the requirements for the degree of Master of Science in Dentistry, Indiana University School of Dentistry, 2009.

Thesis accepted by the faculty of the Department of Operative Dentistry, Indiana University School of Dentistry, in partial fulfillment of the requirements for the degree of Master of Science in Dentistry.

## ACKNOWLEDGMENTS

I would like to thank all of the faculty and staff of the departments of Operative Dentistry, Preventive Dentistry and Dental Materials.

Specifically, I need to thank Dr. Michael Cochran and Dr. Jeffrey Platt for their guidance and assistance with my research. When I seemed to have been at a loss for direction, you helped to put me back on track to a path of completion. I will never forget the special assistance that was extended to me.

I also want to thank my graduate committee members, Dr. Bruce Matis, Dr. Melvin Lund, Dr. Carlos Gonzalez, Dr. Jeffrey Platt and Dr. Michael Cochran. Each mentor had a different, yet very valuable, view that helped me to learn. I am grateful for the opportunity to have been able to work so closely with, and learn so much from each of you. I will forever be in awe of the vast amount of knowledge and experience that I had access to. I hope that I can use the tools that you have passed on to me for the betterment of the profession.

From the dental materials lab, Meaghan MacPherson, you deserve a ton of recognition for having to teach me so much about the lab. You did an excellent job, and helped to make my time spent in lab a little bit more fun.

I also need to give thanks to the US Navy for allowing me to pursue this specialty degree at Indiana University School of Dentistry, and whose blessing and financial support have made this possible.

Finally, I need to give an extra special thank you to my wife, Suzanne, my daughter, Emma, and my son, Scott. Family love and support at home means the world to me.

## TABLE OF CONTENTS

Introduction.....	1
Review of Literature.....	6
Materials and Methods.....	15
Results.....	26
Figures and Tables.....	30
Discussion.....	51
Summary and Conclusions.....	60
References.....	63
Abstract.....	66
Curriculum Vitae	

## LIST OF ILLUSTRATIONS

TABLE I	Materials used: types, dispensing systems, and lot numbers..31
TABLE II	Flexural strength mean and standard deviation.....32
TABLE III	Characteristic flexural strength of Weibull distribution.....33
TABLE IV	Inter-group differences for 24 hour flexural strength comparisons.....34
TABLE V	Inter-group differences for 90 day flexural strength comparisons.....35
TABLE VI	Shear bond strength mean and standard deviation at 24 hours.....36
TABLE VII	Shear bond strength mean and standard deviation at 90 days.....37
TABLE VII	Characteristic shear bond strength of Weibull distribution...38
TABLE IX	Inter-group differences for 24 hour shear bond strength comparisons.....39
TABLE X	Inter-group differences for 90 day shear bond strength comparisons.....40
FIGURE 1	Stainless steel split mold for fabricating flexural strength testing specimens and careful trimming of excess material with a scalpel blade prior to removal of specimen from the split mold.....41
FIGURE 2	Flexural strength/three-point-bending testing apparatus on MTS machine and close view of apparatus.....42
FIGURE 3	Molar preparation; removal of cusps and occlusal enamel and sequence of steps for mounting molars in acrylic resin.....43
FIGURE 4	Indirect resin cylinder fabrication; stainless steel split mold and resin placement into mold and polymerization steps.....44
FIGURE 5	Indirect resin cylinder luted to dentin and 1 kg load placed on resin prior to photo initiation of polymerization.....45
FIGURE 6	Shear bond strength/knife-edge shear testing apparatus on MTS machine and close view of apparatus.....46
